OSHA has changed the standards for Wire Rope Sling Tagging.

Effective July 8, 2011, OSHA prescribed that workers must not use any slings without affixed and legible identification markings. Their wording is as follows:

<table>
<thead>
<tr>
<th>OSHA 29 CFR 1910.184 for Wire Rope Slings</th>
</tr>
</thead>
<tbody>
<tr>
<td>“Employers must not load a sling in excess of its recommended safe working load as prescribed by the sling manufacturer on the identification markings permanently affixed to the sling. Employers must not use any slings without affixed and legible identification markings.”</td>
</tr>
<tr>
<td>“(f) Wire-rope slings—(1) Sling use. Employers must use only wire-rope slings that have permanently affixed and legible identification markings as prescribed by the manufacturer and that indicate the recommended safe working load for the type(s) of hitch(es) used, the angle upon which it is based, and the number of legs if more than one.”</td>
</tr>
</tbody>
</table>

Lift-All can help!

Safety Seminars
Contact your Lift-All distributor to arrange for a Sling Safety Seminar, tailored to your needs and presented by your knowledgeable, local Lift-All salesperson

Inspection and Retagging
Lift-All can help keep you OSHA compliant by performing sling inspections in keeping with the latest regulations. Slings lacking identification can be retagged for a nominal charge if they would otherwise pass inspection. Our rugged, long lasting Tuff-Tags provide the best solution for a difficult application. Proof testing can also be done, upon request, for an additional charge.
